11 Schematic Diagrams

11-1 Cautions

- The areas marked with a ,  or  on the schematic diagram designate components which have special characteristics important for safety. Replace these parts only with parts identical to those in the original circuit and those specified in the parts list. Before replacing any of these components, carefully read the “Product Safety Notice.”
- Areas marked with a  on the schematic diagram designate controls which have been sealed for safety during manufacturing. If these controls need adjustment, they must be replaced with new controls and then sealed after their adjustment.
- When taking measurements, pay special attention to the following:
 - Do not use your instrument between primary ground (symbol ) and secondary circuit.
 - Do not use your instrument between secondary ground (symbol ) and primary circuit.

11-2 Notes

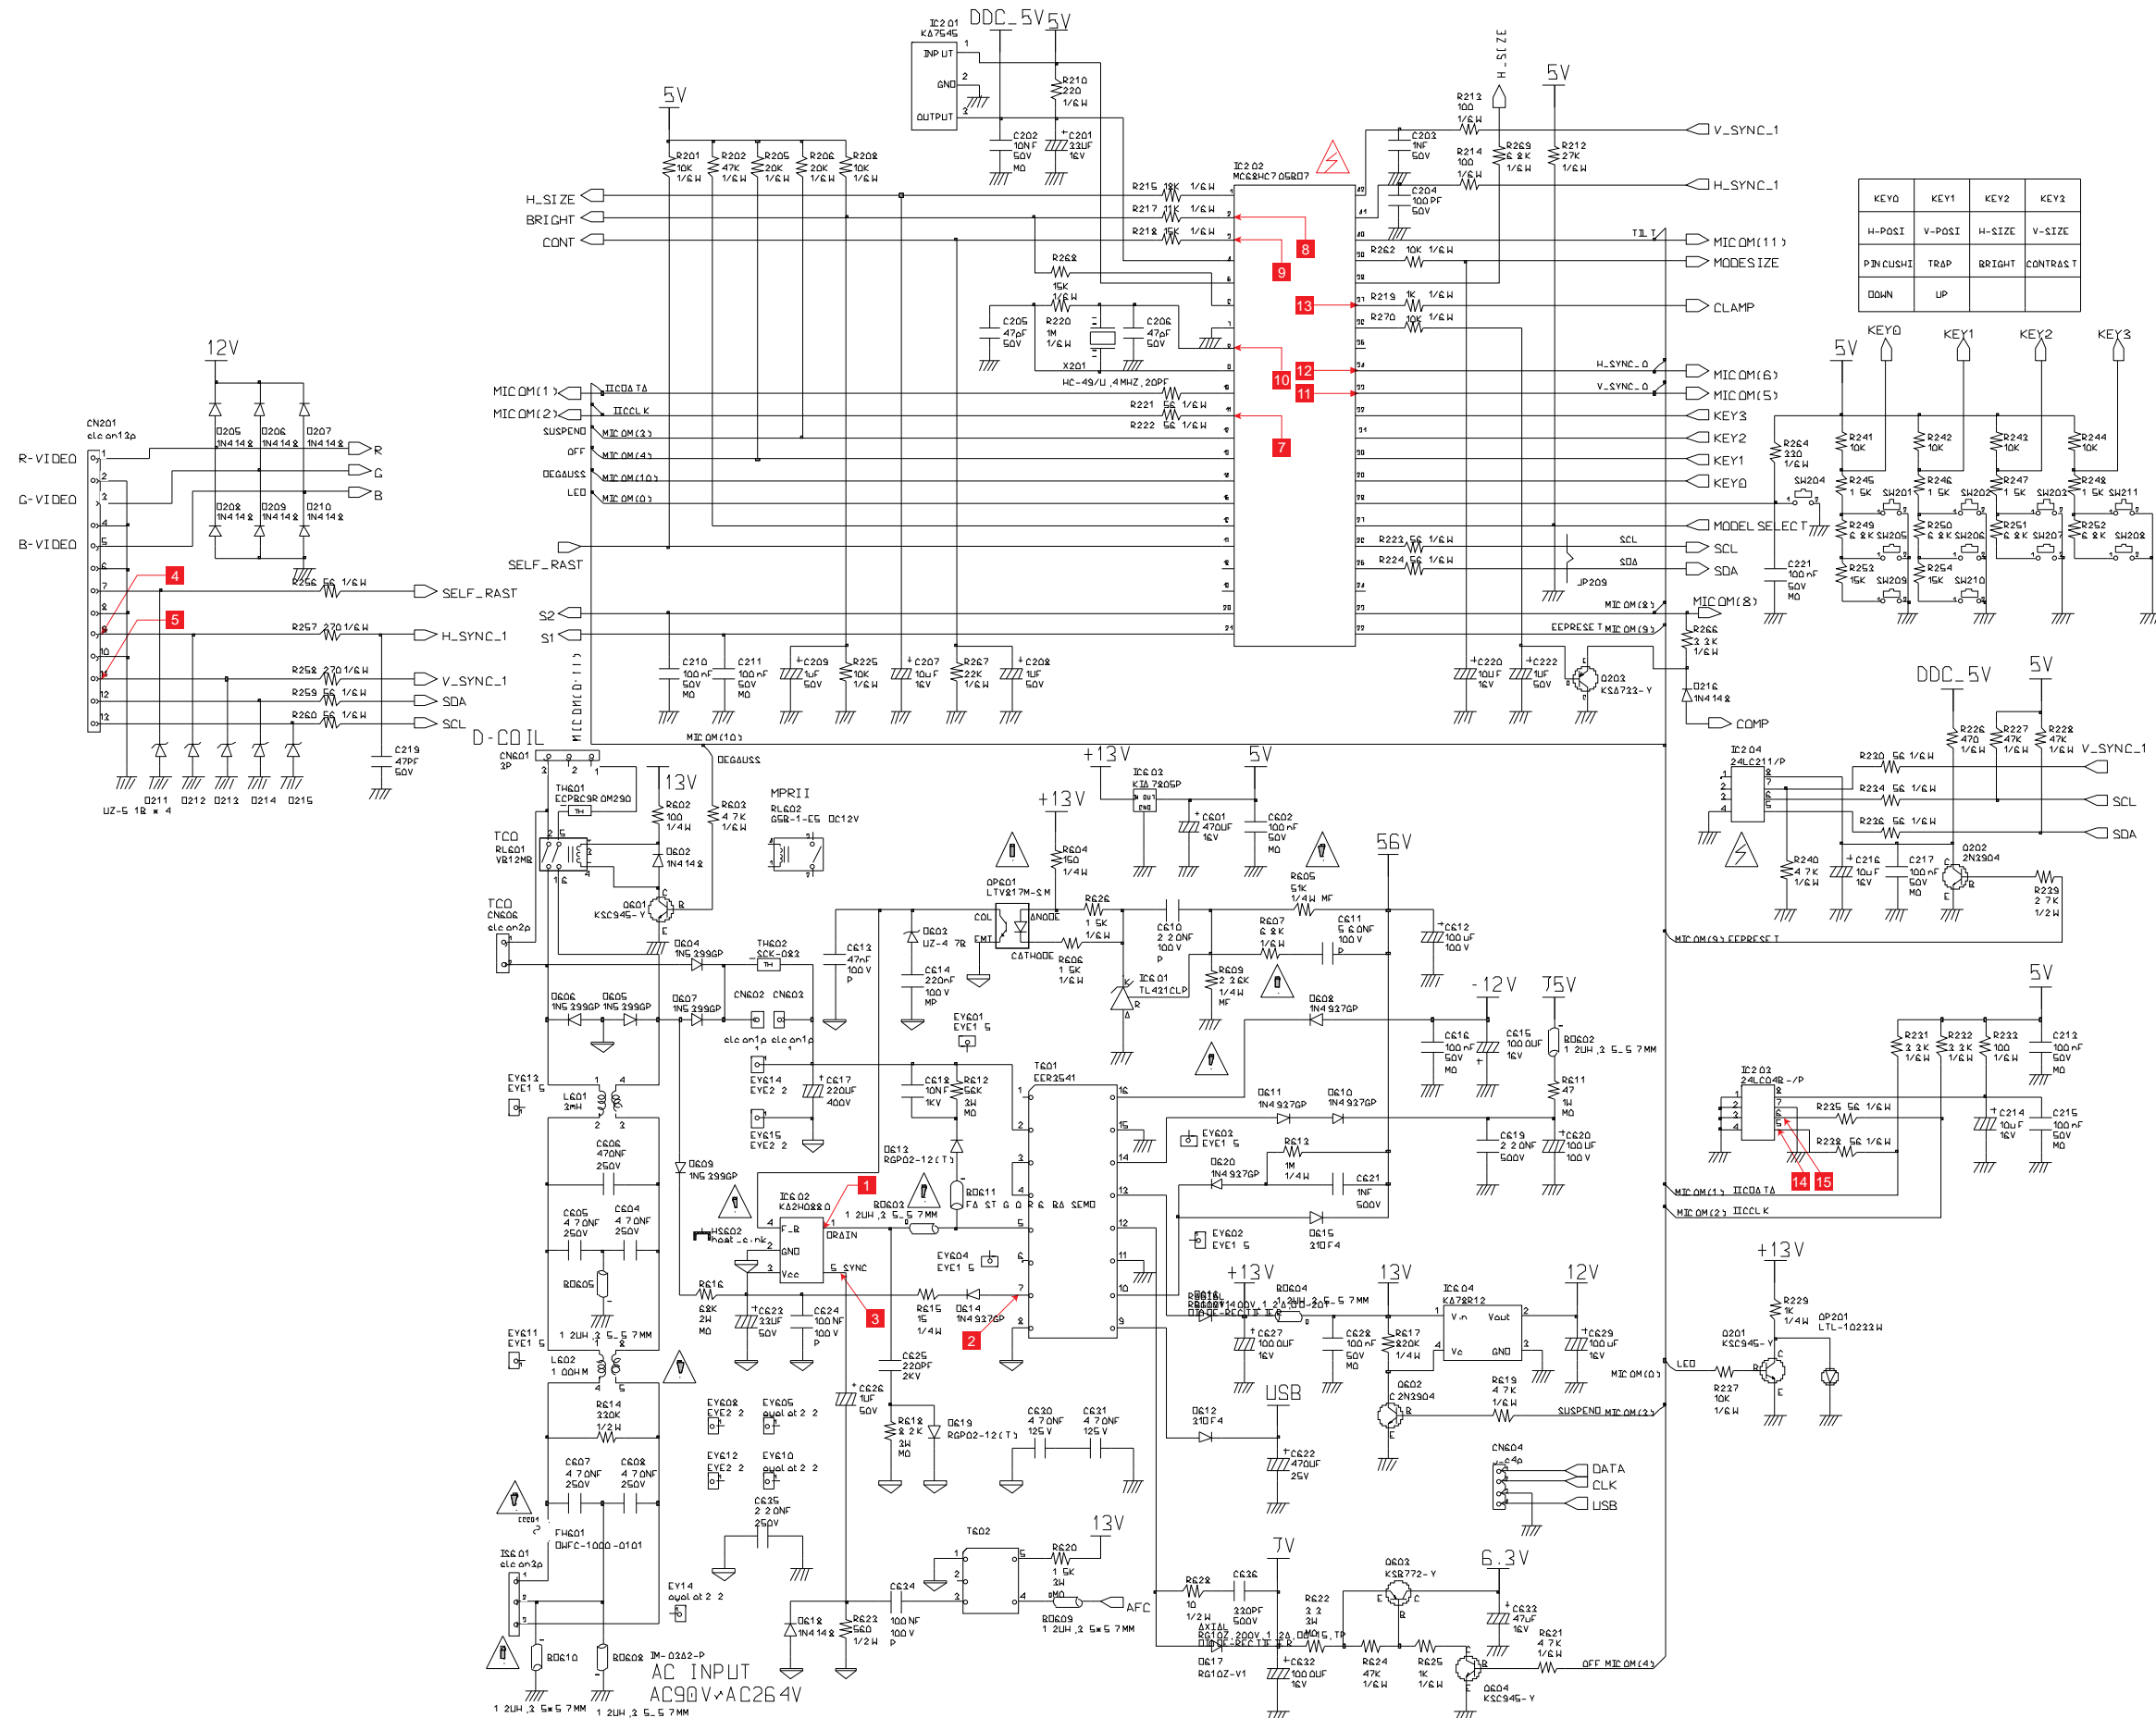

- Resistance is shown in OHM. K = 1,000, M = 1,000,000 and the rated power of resistors not noted in the schematic diagram is 1/4W.
- Capacitance is shown in μ F. Capacitances not otherwise noted are shown in pF (1 μ F = 1,000,000 pF). Rated voltage of condensers not otherwise noted in the schematic diagram is 50 V.

4 Disassembly and Reassembly

This section of the service manual describes the disassembly and reassembly procedures for the CKA42*7L/5227L monitors.

WARNING: This monitor contains electrostatically sensitive devices. Use caution when handling these components.

4-1 Disassembly

Cautions: 1. Disconnect the monitor from the power source before disassembly.
2. Follow these directions carefully; never use metal instruments to pry apart the cabinet.

4-1-1 Cabinet Disassembly

1. With a pad beneath it, stand the monitor on its front with the screen facing downward and the base closest to you. Make sure nothing will damage the screen.
2. Press in the tab on the Cabinet Bottom and pull the Tilt and Swivel Base upward to remove it.
3. Working from the back of the monitor, remove the four screws and remove the Rear Cover.
4. Using pinch-nose pliers or long-nose pliers, carefully disconnect the Anode Cap from the CRT.

Caution: Do not touch the anode contact on the CRT.

4-1-2 Removing the CRT Socket PCB

1. Complete all previous steps.
2. Disconnect CRT and Main PCB ground wires on CRT Socket PCB and Shield Cover.
3. Desolder the 5 tabs on the underside of the CRT Socket PCB shield and remove the CRT Socket PCB Shield.
4. Using a knife, cut through the silicone bond and lift off the CRT Socket PCB.
5. Disconnect connectors CN102 and two ground wires on the CRT Socket PCB.

4-1-3 Removing the Main PCB

1. Complete all previous steps.
2. Disconnect Degaussing Coil at the CN601 connector on the Main PCB.
3. Disconnect all easily accessible ground wires on the Main PCB and Chassis Bottom.
4. Disconnect the DY connector between the DY and the CN301, CN302, CN502 and CN503 connector on the Main PCB.
5. Remove the screws on the back and along each side of the Chassis Bottom.
6. Carefully lift the Main PCB Ass'y.
7. Remove all other ground wires.

4-1-4 CRT Ass'y Disassembly

1. Complete all previous steps.
2. Straighten the Degaussing Coil Assembly coated metal ties and lift Coil Ass'y from the CRT.
3. Remove the four corner screws and lift the CRT up and away from the Front Cover Assembly and place it on a padded surface.

Caution: Do not lift the CRT by the neck.

If you will be returning this CRT to the monitor, be sure to place the CRT face downward on a protective pad.

4-2 Reassembly

With the CRT facing downward on a protective pad, use the steps that follow to reassemble the monitor.

4-2-1 Replacing the CRT

1. Loop the CRT Ground Ass'y around the back of the CRT and under the four corner metal ears. Position last the corner with the spring.
2. With the Front Cover Assembly lying face down on a protective pad, position the CRT so that the corner metal ears fit properly in the Front Cover Assembly.
3. Secure the CRT ground Ass'y and CRT at each of the four corners with the CRT screws.
4. Replace the Degaussing Coil Assembly and wrap the Coil with the plastic coated metal ties to hold the Coil in place.

4-2-2 Replacing the Main PCB

1. Stand the monitor on its front with the screen facing downward.
2. Slide the Main PCB into the Chassis Bottom and replace the wires and screws on the Chassis Bottom.
3. Position the Main PCB Ass'y in the front Cabinet and secure it with the screws.
4. Replace both side CRT ground wires on the Chassis Bottom.
5. Replace the Degaussing Coil at the CN601 connector on the Main PCB.
6. Replace the DY connector at the CN301, CN302, CN502 and CN503 connector on the Main PCB.
7. Replace all easily accessible ground wires on the Main PCB and Chassis Bottom.
8. Replace the Anode Cap.

4-2-3 Replacing the CRT Socket PCB

1. Lock the Focus (G3) wire on the CRT Socket and reconnect the Screen (G2) wire on the CRT Socket PCB.
2. Reconnect the CRT Socket on the CRT pins and apply silicon bond at the Plug/Socket Junction.
3. Replace the CRT and Main PCB ground wires on CRT Socket PCB and Shield Cover.
4. Reconnect the connectors CN102 to the CRT Socket PCB.
5. Solder the 5 tabs on the underside of the CRT Socket Shield.

4-2-4 Cabinet Reassembly

1. Complete all previous steps.
2. Position the Rear Cover marking sure the tabs along the front edge are properly snapped in place. Replace the four screws.
3. Snap the Tilt and Swivel Base into position.
4. Set the monitor on its Base and make sure that the CRT faceplate was not scratched or otherwise damaged.

5 Alignment and Adjustments

This section of the service manual explains how to make permanent adjustments to the monitor. Directions are given for adjustments using the monitor Interface Board Ver. 2.0 and software (SoftJig).

5-1 Adjustment Conditions

Caution: Changes made without the SoftJig are saved only to the user mode settings. As such, the settings are not permanently stored and may be inadvertently deleted by the user.

5-1-1 Before Making Adjustments

5-1-1 (a) ORIENTATION

When servicing, always face the monitor to the east.

5-1-1 (b) MAGNETIC FIELDS

Whenever possible, use magnetic field isolation equipment such as a Helmholtz field to surround the monitor. If a Helmholtz field is not available, frequently degauss the unit under test.

Caution: Other electrical equipment may cause external magnetic fields which may interfere with monitor performance.

Use an external degaussing coil to limit magnetic build up on the monitor. If an external degaussing coil is not available, use the internal degaussing circuit. However, do not use the internal degaussing circuit more than once per 30 minutes.

5-1-1 (c) WARM-UP TIME

The monitor must be on for 30 minutes before starting alignment procedures. Warm-up time is especially critical in Color Temperature and White Balance adjustments.

5-1-1 (d) SIGNAL

Analog, 0.714 Vp-p positive at 75 ohm, internal termination
Sync: Separate
(TTL level negative/positive)

5-1-1 (e) SCANNING FREQUENCY

Horizontal: 30 kHz to 55 kHz (automatic)
Vertical: 50 Hz to 120 Hz (automatic)

Unless otherwise specified, adjust at the 800 x 600 mode (H : 53.7 kHz, V: 85 Hz) signals.

Refer to Table on page 2-5.

5-1-1 (f) +B 13 V LINE CHECK

No beam

Contrast: Maximum

Brightness: Maximum

Check the DC 13 V \pm 0.2 V at Cathode of D616 Point and GND.

5-1-1 (g) HIGH VOLTAGE CHECK

5-1-3 Connecting the SoftJig

Connect the monitor to the signal generator and/or PC as illustrated in Figures 5-1 and 5-2.

Note: The signal cable connector which includes the 3-wire cable must connect to the monitor. If you use Setup 2 (PC only, no signal generator) you can only make adjustments to the signal timing available on that computer system. To make corrections to all factory timings requires the use of an additional signal generator.

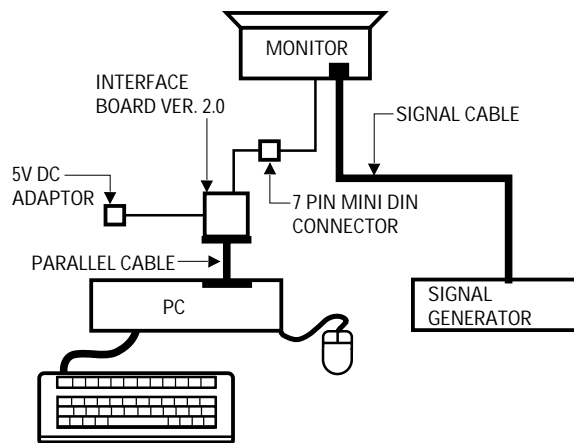

Figure 5-1 : Setup 1, With Signal Generator

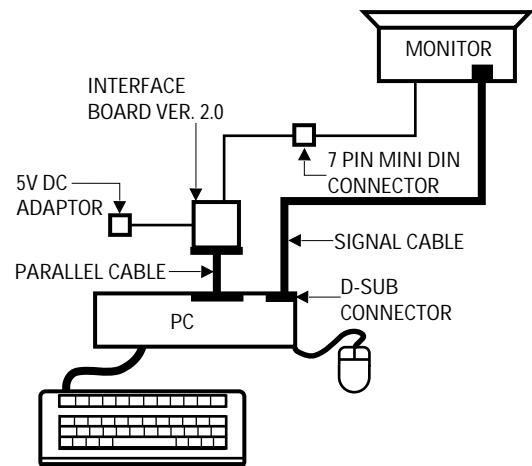

Figure 5-2. Setup 2, Without Signal Generator

5-1-4 After Making Adjustments

After finishing all adjustments, test the monitor in all directions. If, for example, the monitor does not meet adjustment specifications when facing north, reposition the monitor to face east and readjust. This time, try for an adjustment closer to the ideal setting within the tolerance range. Test the unit again in all directions. If the monitor again fails to meet specifications in every direction, contact your Regional After Service Center for possible CRT replacement.

5-2 Display Control Adjustments

5-2-1 Centering

Centering means to position the center point of the display in the middle of the display area. Horizontal size and position and vertical size and position control the centering of the display.

Adjust the horizontal size and vertical size to their optimal settings: 267 mm (H) x 200 mm (V) for 15", 255 mm (H) x 191 mm (V) for 14"

Adjust the horizontal position and vertical position to within 4.0 mm of the center point of the screen.

$|A - B| \leq 4.0 \text{ mm.}$

$|C - D| \leq 4.0 \text{ mm.}$

5-3 Color Adjustments

Note: To make color adjustments you must have a color analyzer and one of the following configurations:

1. Signal Generator
or
2. Computer with Samsung DM 200 software or DisplayMate for Windows software from Sonera Technologies
3. In case of CKA5227L, use 800 x 600 mode signal (53.7 kHz/85 Hz) for adjustments, in case of CKA42*7L, use 640 x 480 mode signal (43.8 kHz/85 Hz).

Before making adjustments, check that the video signals are as follows:

Video: Analog, 0.714 V_{p-p} (at 75 Ω termination)

Sync: Separate TTL level

Unless otherwise specified, use 800 x 600 mode signal (53.7 kHz/85 Hz) for adjustments.

5-3-1 Color Coordinates (Temperature)

5-3-9 Color Purity Adjustment

Color purity is the absence of undesired color. Conspicuous mislanding (unexpected color in a uniform field) within the display area shall not be visible at a distance of 50 cm from the CRT surface.

CONDITIONS

- Orientation: Monitor facing east
- Scanning frequency: 53.7 kHz/85 Hz (15")
43.8 kHz/85 Hz (14")
- Display image: White flat field
- Luminance: Cutoff point at the center of the display area

Caution: Color purity adjustments should only be attempted by qualified personnel.

PROCEDURE

For trained and experienced service technicians only.

Use the following procedure to correct minor color purity problems:

1. Make sure the display is not affected by external magnetic fields. Use an external degaussing coil to neutralize magnetic fields which may be affecting color purity.
2. Very carefully break the glue seal between the 2-pole purity convergence magnets (PCM), the band and the spacer (see Figure 5-9).

3. Make sure the spacing between the PCM assembly and the CRT stem is 22.5 mm ± 1 mm.
4. Display a red pattern over the entire display area.
5. Adjust the Purity Magnet Rings on the PCM assembly to display a pure green pattern. (Optimal setting: $x = 0.310 \pm 0.015$, $y = 0.592 \pm 0.015$)
6. Repeat steps 4 and 5 using a red pattern and then again, using a blue pattern.

Table 5-3. Color Purity Tolerances

Red:	$x = 0.625 \pm 0.015$	$y = 0.340 \pm 0.015$
Green:	$x = 0.310 \pm 0.015$	$y = 0.592 \pm 0.015$
Blue:	$x = 0.150 \pm 0.015$	$y = 0.063 \pm 0.015$

(For 9300°K white color adjustment:
 $x = 0.283 \pm 0.02$, $y = 0.298 \pm 0.02$)

7. When you have the PCMs properly adjusted, carefully gule them together with Locktite to prevent their movement during shipping.

5-4 Convergence Adjustments

Misconvergence occurs when one or more of the electron beams in a multibeam CRT fail to meet the other beams at a specified point.

Table 5-4. Misconvergence Tolerances

5-4-1 Static (Center) Convergence

Static convergence involves alignment of the red, blue and green lines in the center area of the display.

See “Dynamic Convergence” for alignment of color fields around the edges of the display.

CONDITIONS

Direction: Monitor facing east
 Warm-up: 30 minutes
 Display image: Crosshatch pattern
 Tolerances: See Table 5-5

PROCEDURE

As shown in Figure 5-9, the CRT used in this monitor has the magnet configuration as shown in Table 5-6.

Table 5-5. Magnet Configurations

CRT Manufacturer	Magnet Order from Front of CRT
Toshiba	Convergence bow, 2-pole, 6-pole, 4-pole

Use the following steps to correct any static misconvergence:

1. Locate the pair of 4-pole magnet rings.
2. Unlock the rings and rotate the individual rings (change the spacing between tabs) to converge the vertical red and blue lines.
3. Rotate the pair of rings (maintaining spacing between tabs) to converge the horizontal red and blue lines.
4. After completing the red and blue center convergence adjustment, locate the pair of 6-pole magnet rings.
5. Rotate the individual rings (change the spacing between tabs) to converge the vertical red and blue (magenta) and green lines.
6. Rotate the pair of rings (maintaining the spacing between tabs) to converge the horizontal red and blue (magenta) and green lines. Don't rotate the 2-pole magnets as they adjust for color purity.
7. Mark the correct position for the magnets and apply a small line of glue to hold the magnets in place. Lock the rings in place.

5-4-2 Dynamic (Edge) Convergence

CONDITIONS

Direction: Monitor facing east
 Warm-up: 30 minutes
 Display image: Crosshatch pattern
 Tolerances: See Table 5-5

PROCEDURE

Use the following procedure to correct minor dynamic (edge) misconvergence. If, after using this procedure, dynamic misconvergence is still greater than the tolerance around the periphery of the display area, contact the Regional After Service Center for possible CRT replacement.

1. Make sure the display is not affected by external magnetic fields.
2. Make sure the static convergence is properly adjusted.
3. Strategically place small magnet rubbers on the back of the CRT to correct the misconvergence. Be careful not to remove the paper protecting the adhesive on the magnet rubbers until you are satisfied with their placement and the dynamic convergence.
4. When you are satisfied with the convergence around the edge of the CRT, permanently glue the magnet rubbers to the back of the CRT.

WARNING: Do not remove or change the position of the factory installed wedges. These wedges were installed by the CRT manufacturer and are properly placed for this CRT; their removal may result in damage to the CRT.

5-4-3 Bow Convergence Adjustments

CONDITIONS

Orientation: Monitor facing east.

Display Image: Crosshatch pattern with mixed RGB colors.

Required tools: Philips (+) screwdriver, 1.5 mm
Hexkey, 2.5 mm

PROCEDURE

Bow convergence adjustments are not available for the CRTs used in the CKA42*7L/5227L monitors. While all CRTs have bow convergence magnets, they are sealed in the CRT factory and are not user or service technician adjustable. Do not touch these magnets (see Figure 5-9). If bow convergence adjustment is out of alignment, replace the CRT.

Bow misconvergence should not exceed the values listed in Table 5-5: Misconvergence Tolerances.

5-4-4 Balance Convergence Adjustments

Balance Convergence involves alignment of red and blue lines when they are misaligned at one end more so than at the other end. The Deflection Yoke holds the balance coils which can correct balance misconvergences.

Figure 5-11. Deflection Yoke Caps

5-4-4 (a) HORIZONTAL LINE RED AND BLUE BALANCE CONVERGENCE

Figure 5-12. Horizontal Line Balance Misconvergence

PROCEDURE

Use a 2.5 mm hexkey at the Horizontal Balance Coil (Xv). Turning it right raises the right end of the blue line and lowers the left end. Turning the VR to the left lowers the right end of the blue line and raises the left end.

5-4-4 (b) VERTICAL RED AND BLUE BALANCE CONVERGENCE

Figure 5-13. Vertical Line Balance Misconvergence

PROCEDURE

Use a 1.5 mm phillips (+) screwdriver at the YH variable resistor. Turning the VR to the left tilts the blue line to the right. Turning it right tilts the blue line to the left.

5-4-4 (c) UPPER AND LOWER HORIZONTAL LINE CONVERGENCE

Figure 5-14. Upper and Lower Balance Misconvergence

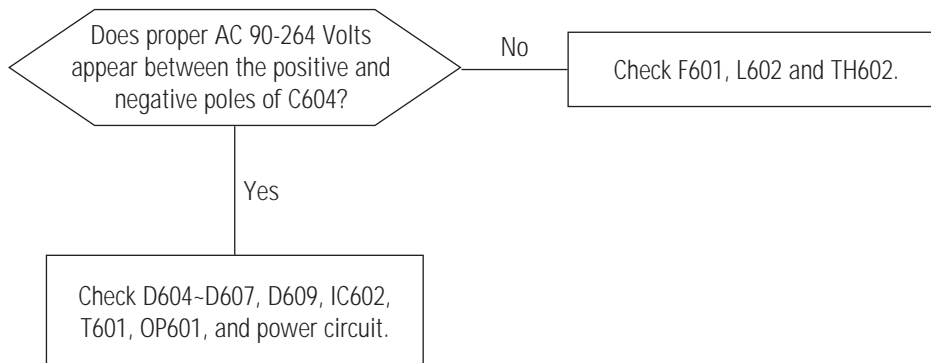

PROCEDURE

Use a 1.5 mm phillips (+) screwdriver at the Yv variable resistor. Turning the VR to the left moves the blue line at the top upward and at the bottom, the line moves downward. Turning it right moves the blue line at the top downward and at the bottom the line moves upward.

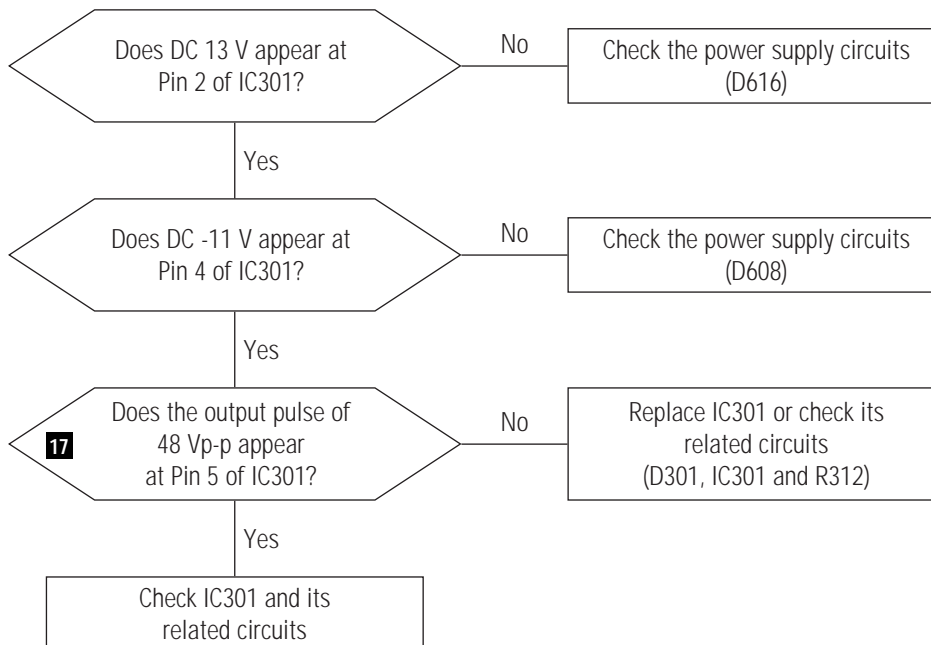

6 Troubleshooting

- Notes:** 1. If a picture does not appear, fully rotate the brightness and contrast controls clockwise and reinspect.
2. Check the following circuits.
- No raster appears: Power circuit, Horizontal output circuit, H/V control circuit, and H/V output circuit.
 - High voltage develops but no raster appears: Video output circuits.
 - High voltage does not develop: Horizontal output circuits.
